Contract-Quote for Holiday Lighting

Mission Statement

To create exceptional custom designed displays that not only look beautiful but are dependable and safe as well. We also put safety first for all of our employees
Rob Peters Owner

Installation service

We will install the agreed upon display and guarantee our work through the end of December. We will set the provided timers either upon the installation or on the date of your choice. We highly recommend early installations as we can work out any issues should they arise. We give graduated discounts for early installations. The earlier the install the more the discount. We will light the display on the date of your choosing.

Monitoring

We will monitor your display for the duration of the holiday season (December 31st). There will be a \$30 service charge for changing out less than 3 burned out bulbs. We are not responsible for acts of god such as extreme weather events or vandalism. We will always repair any display that does not function because of faulty lights, timers, or cords that we provided at no additional charge

Materials inclusive

We provide all of the materials as we always use new lights & will know exactly how many lights, extension cords, and type of clips you will need. We also guarantee our materials through the holiday season. You are leasing the display for the holiday season

Removal

We will have all displays removed by January 10th unless other arrangements have been made. The minimum removal charge is \$50.

Power

We will do our best on the initial consultation to advise you on the type of display that is appropriate & safe for your electrical system.

Icicle lights

Icicle lights are very temperamental (if one bulb gets loose or shorts the entire section of the line usually has to be replaced) and are not recommended for windy areas. There will be an extra initial fee for these as well as a \$50 repair fee for each repair service.

LED lights

As of 2016 the warm white mini white led have fallen below 3500 kelvin and are a great option if your power is limited. The bad news is that they aren't any more reliable than the incandescents (due to the wires) and cost 3 times as much. The larger leds are good for big trees but due to their small bases (don't fit into clips) and close spacing (most are 4" to 6" as apposed to 12 ") don't look good on rooflines

Payments

All payments are due the day of completion of the job. Deposits are due on larger or commercial jobs that we are fronting materials.

Typical Display packages and notes

Package A

A typical roofline with C7 bulbs.

We use clips where possible to minimize the impact and keep the lines straight and follow the gutter lines and peaks on the front edge of the house. On small, to mid sized houses these can usually be powered by one outlet with one timer. Custom colors and combinations can be done with an extra fee as well as additional sides of the home. It does not include outlining the top of the roof, of which we can do on certain roofs at an extra fee but we will not be responsible for leaks and it will require a minimum of 2 separate circuits

Package B

Trees and shrubs.

Depending on the type of tree we can wrap the trunk and branches or drape the lights in a traditional style. Sometimes we will do a combination of both. The amount of lights it takes to light large trees goes up exponentially with the height

Package C

Combination of the roofline and trees or shrubs, A plus B combined

Package D

Garland and Wreaths

We can custom cut and light garland or wreaths and hang them on your rails as well as hang wreaths on peaks and above entry ways. We sell these products and you keep them as they are custom for your particular home or business. Please note that if you live in a windy area (West Seattle , Snoqualmie Ridge, North Bend) There is a chance that the wreaths could scratch the paint or glass they are hung next to. It is rare but something to be aware of.
